PROBLEM STATEMENT

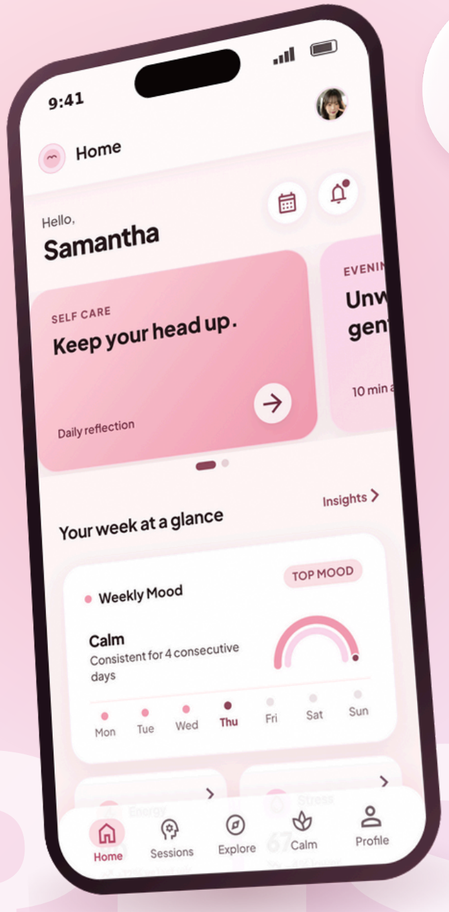

Stress builds up quietly

The problem

Everyday stress, overthinking and poor sleep build up quietly. Most people don’t check in with their feelings until it gets heavy.

Who has it

Students and young working adults who juggle study, work and family. They want support, but they are not in crisis.

Thoughts racing

Stress · 67

When it happens

At night when thoughts race, before a stressful task, or after a long day. These moments leave only a few minutes to spare.

01

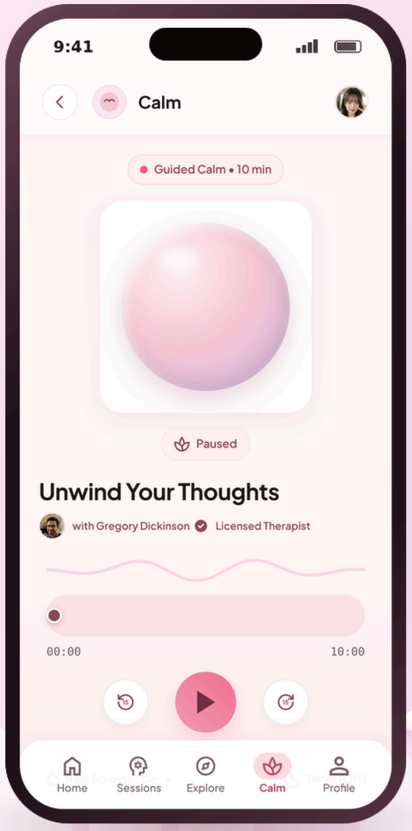

PROBLEM STATEMENT

Too slow to help

CURRENT ALTERNATIVES

How people cope now

- ✕ Scrolling social media to switch off
- ✕ Journaling apps with long forms
- ✕ Meditation apps with huge libraries and paywalls
- ✕ Waiting weeks for a therapy appointment
- ✕ Doing nothing until the stress builds up

PROPOSED SOLUTION

How Mental Help does it better

- ✓ A one-tap check-in with six feelings
- ✓ A breathing orb that slows your breath
- ✓ Short lo-fi audio with rain sounds
- ✓ Therapist sessions booked in a few taps
- ✓ A mood calendar and weekly view with your streak

CHOICES

02

TARGET AUDIENCE

Quick support, young adults

University students

Exam stress, late nights and poor sleep.

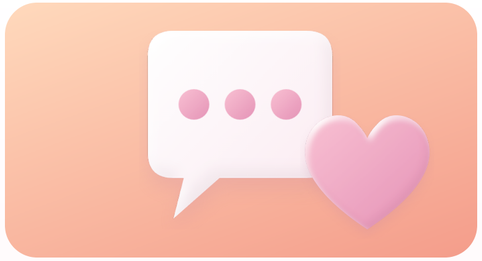

`About 18–24`

Young professionals

Work pressure and overthinking after hours.

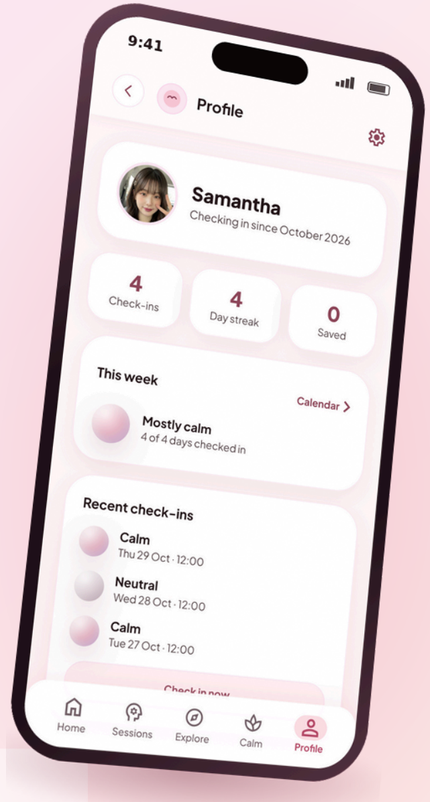

`About 23–35`

New to therapy

Curious about therapy, but unsure where to start.

`Any age`

BUILT FOR

Everyday stress, sleep and overthinking

NOT BUILT FOR

Crisis care or medical diagnosis

AUDIENCE

02

TARGET AUDIENCE · PERSONA BOARD

Meet Samantha

Samantha, 26

Junior marketing executive

Phone-first

Busy weekdays

"I know I should look after my mind. I just never find the time."

Goals

- Notice her mood each day
- Wind down before sleep
- Try therapy without hassle

Frustrations

- Meditation apps feel overwhelming
- Journaling forms take too long
- Therapy prices are unclear

Daily habits

- Checks her phone between meetings
- Has 2–5 minute gaps in her day
- Listens to audio in bed

What she needs

- A one-tap check-in
- Breathing that paces her
- Clear prices, quick booking

02

SCOPE · CHOSEN BREAKPOINT

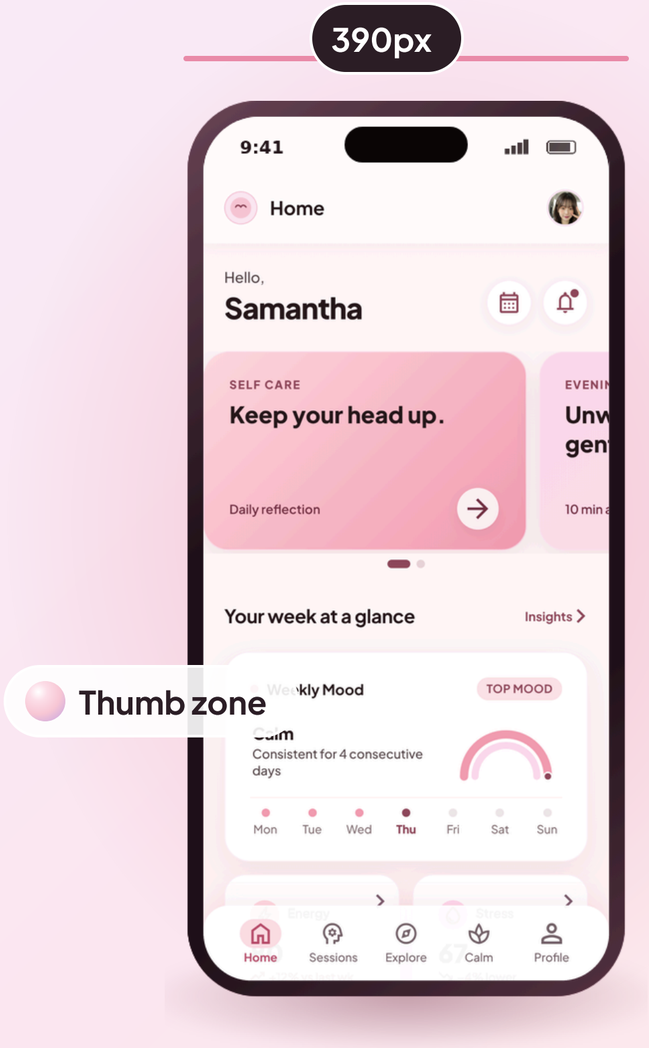

Made for one hand

BREAKPOINT

Mobile-first web app

390px

Design width. Bigger screens show a centred 430px column.

01 Thumb reach

Five tabs sit in a bottom bar. Save and Buy Now sit in the lower half.

02 Touch targets

Every tap area is at least 44×44px, even when the icon looks smaller.

03 One column

Cards stack top to bottom, so there is one clear path down the screen.

04 Calm to read

Large type, AA contrast and a reduce-motion setting in Settings.

03

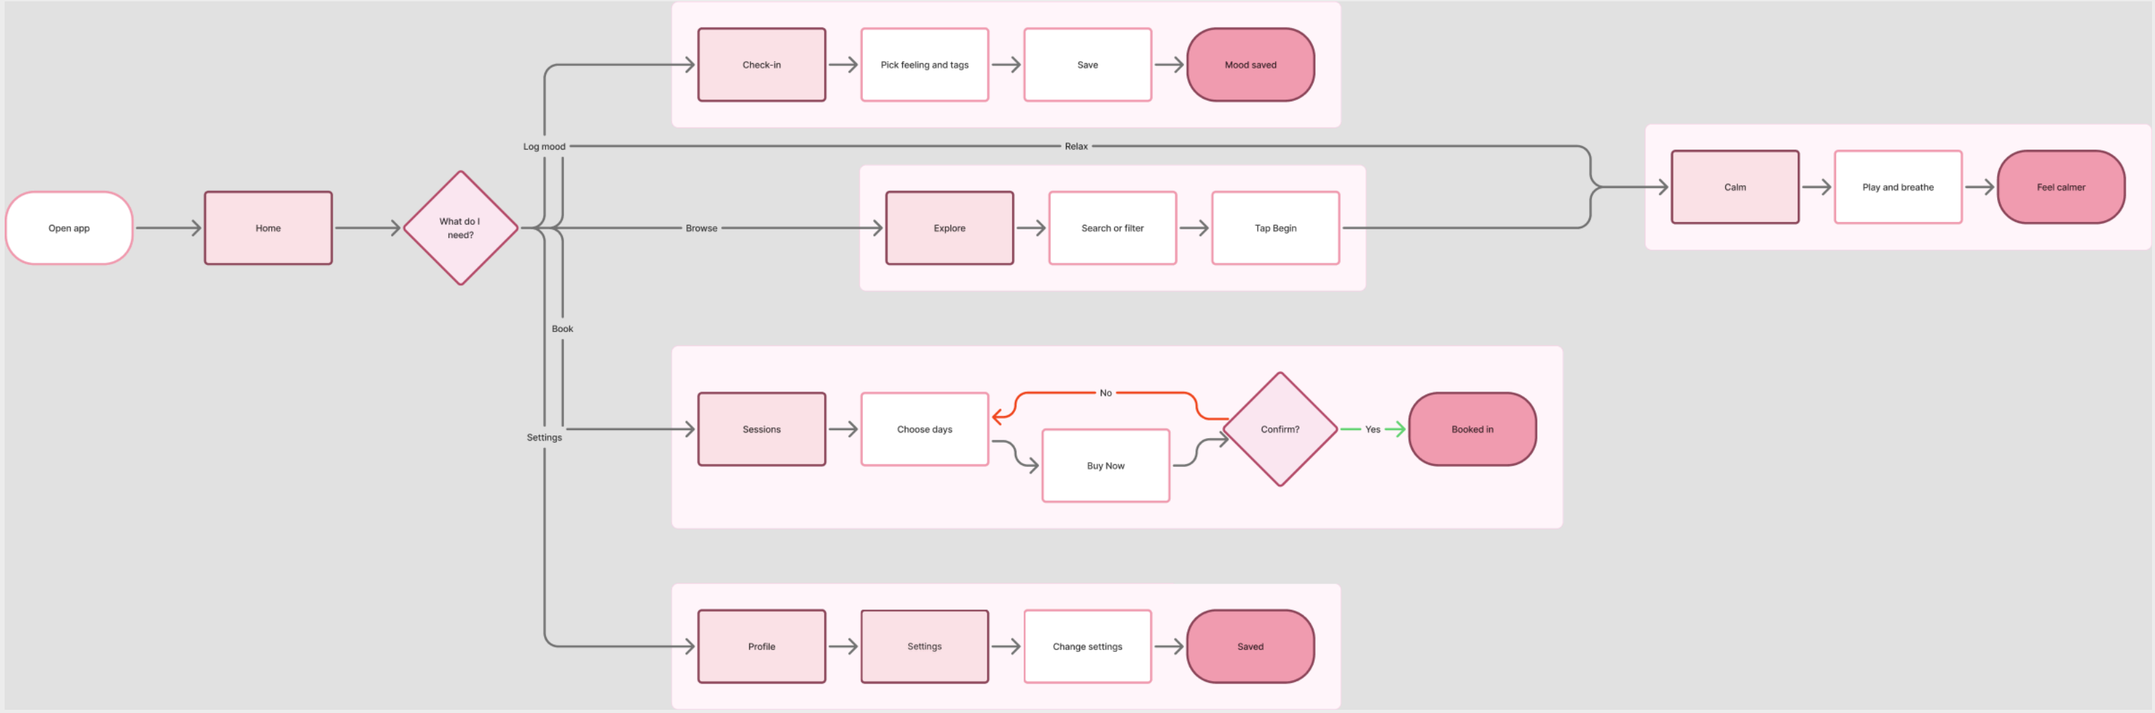

USER FLOW

Sleep | Work | Family

3 Days | **4 Days** | 5 Days

04

DESIGN SYSTEM · CREATIVE DIRECTION

Make the mascot breathe, not pose

A · Refined Soft Vinyl

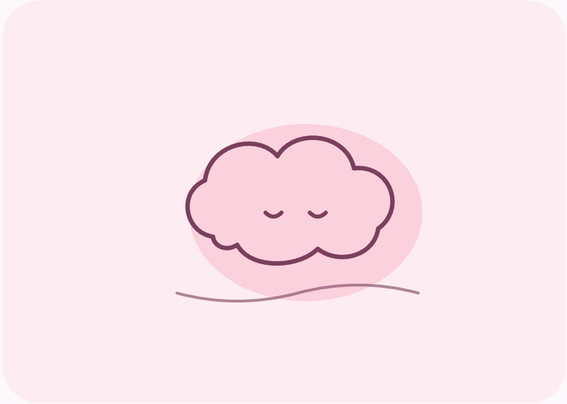

A premium art-toy cloud. Great for stills, but every state needs a new render.

Chosen

B · Breathing Light

A frosted orb lit from inside. Drawn in code, so it breathes with the audio and scales from logo to hero.

C · Warm Editorial Line

Hand-drawn ink over watercolour. Very human, but hard to animate and common in journal apps.

MASCOT

04

DESIGN SYSTEM · RATIONALE

Why the old mascot felt generic

WHAT I FOUND

It looked like every other AI mascot

The 3D renders looked like stock images and never reacted to the user. Even the logo cloud wore the “Anxious” face.

04

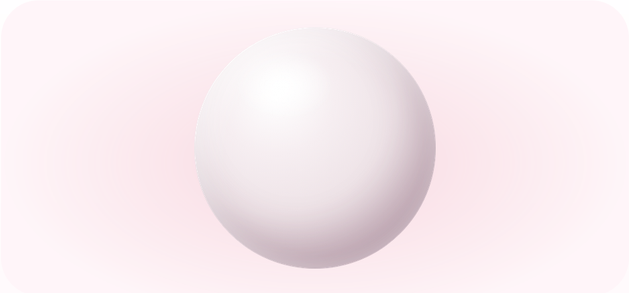

DESIGN SYSTEM · RATIONALE

What I changed

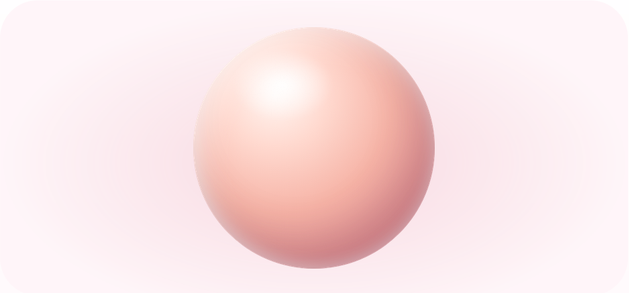

Show mood with form, light and speed

No cartoon face. It reads like a weather app or a smart light.

One body, many states

One companion across the app, so users bond with it.

Acknowledge, then soothe

Anxious and Frustrated start fast, then slow into calm.

CALM

Pacer

leads your breath

CHECK-IN

06

REFERENCES

What I kept, and what I changed

WHAT I KEPT

A soft, friendly mascot

Big rounded numbers, like 4 Days and $59

A wave slider for picking days

Floating cards with soft shadows

WHAT I CHANGED

Orange and lilac became one blush palette

The clay mascot became a breathing orb

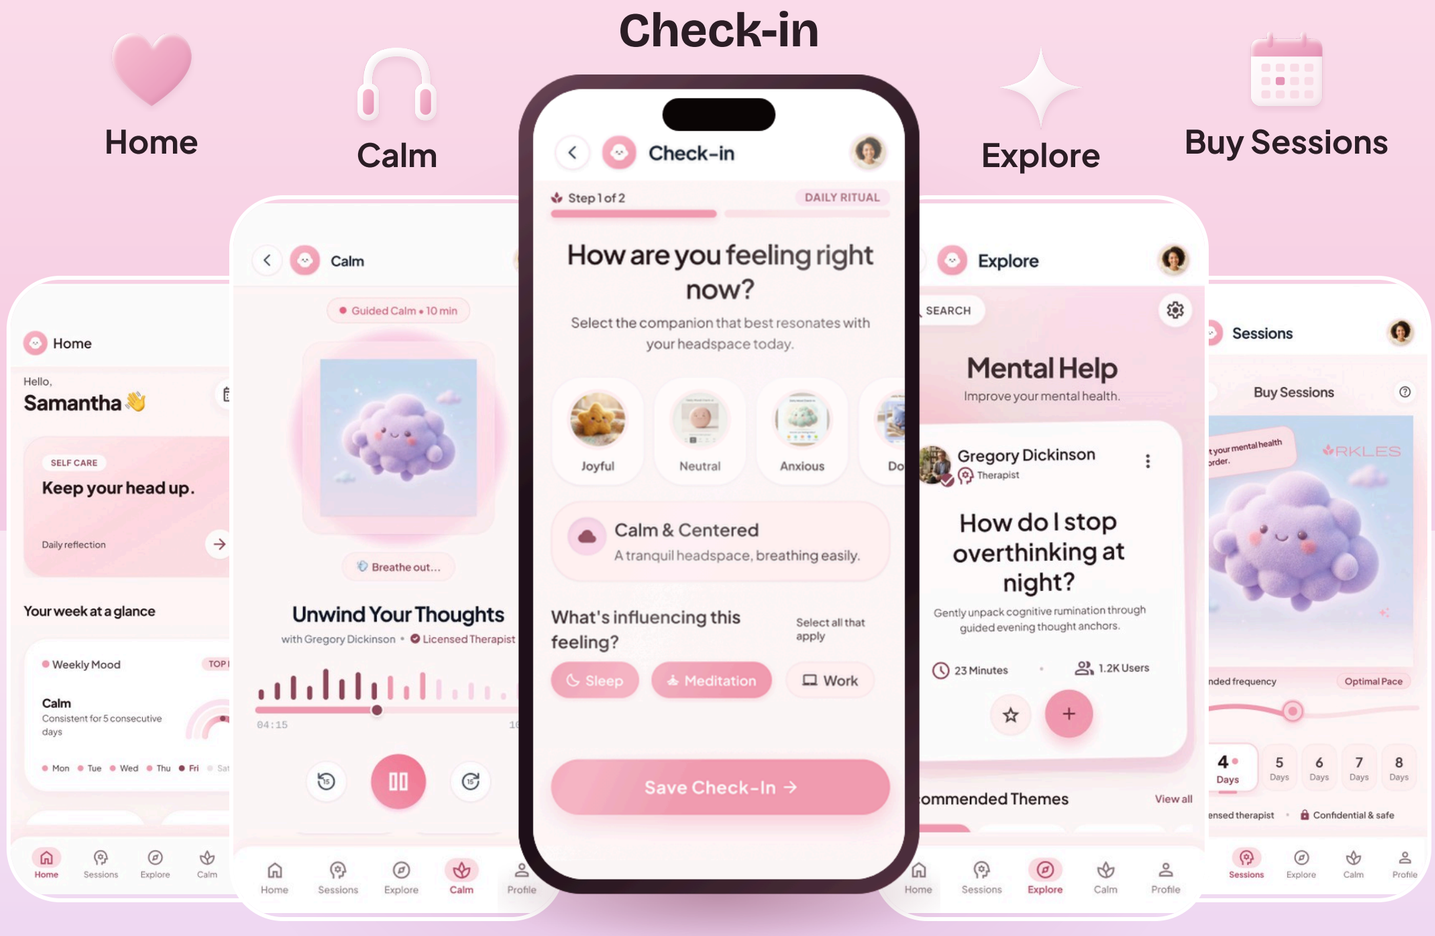

Added Check-in, Calm audio, Calendar, Profile and Settings

07

Profile

08

BUILT WITH CODEX · ADDED AFTER TESTING

Profile, Calendar and Settings

/profile

Profile shows my progress

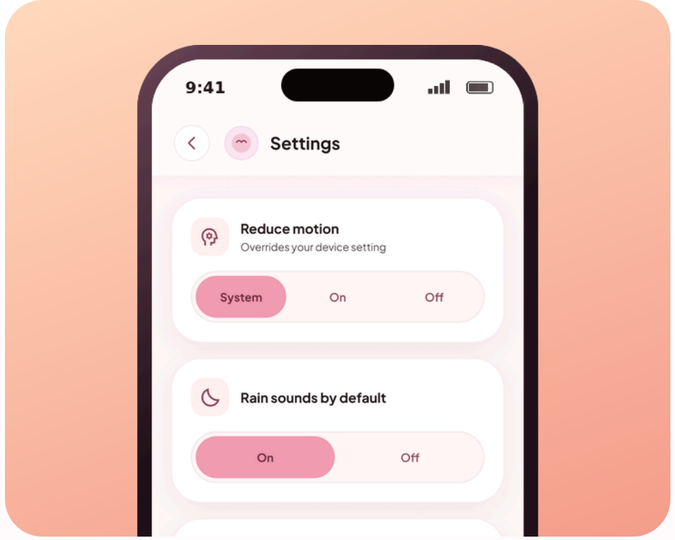

Check-in numbers, this week's mood, recent check-ins, saved sessions and my booked plan.

/calendar

Calendar shows every day

A month view of my check-ins, Monday first. Tap a day to see what I logged.

/settings

Settings holds the controls

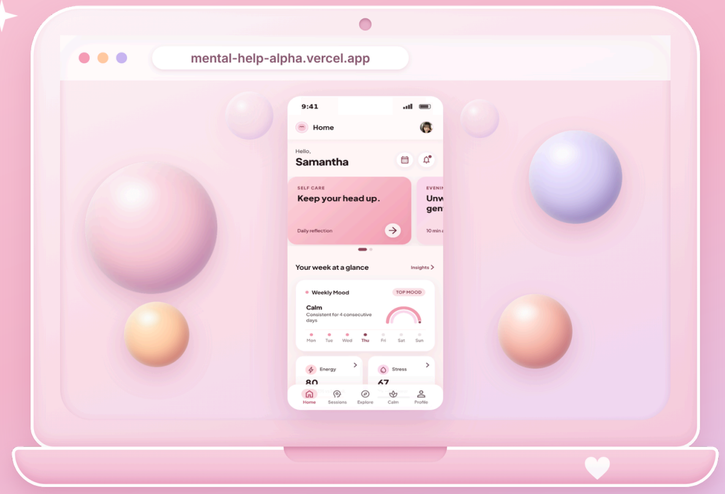

Reduce motion, rain sounds, clear check-ins and About. Opens from the gear on Profile.

09

BONUS CHALLENGES

Six bonus challenges, from code to sound

Part 1 · Build and ship

```
<Calm />
app.tsx
✓ built
```

React + TypeScript

Built with React, Vite, TypeScript, React Router and CSS Modules.

● Ready

Production

Vercel

Custom deployment

Live on Vercel, with rewrites so every link opens the right screen.

On this phone

12

check-ins

On-device data

Check-ins, bookings and saved items stay on the phone. No account needed.

09

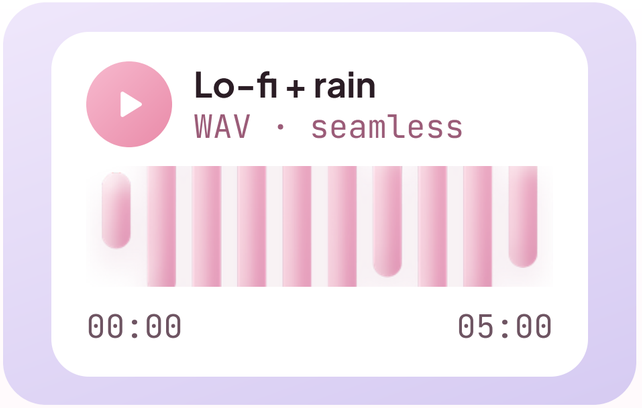

BONUS CHALLENGES

Part 2 · Motion, sound and AI

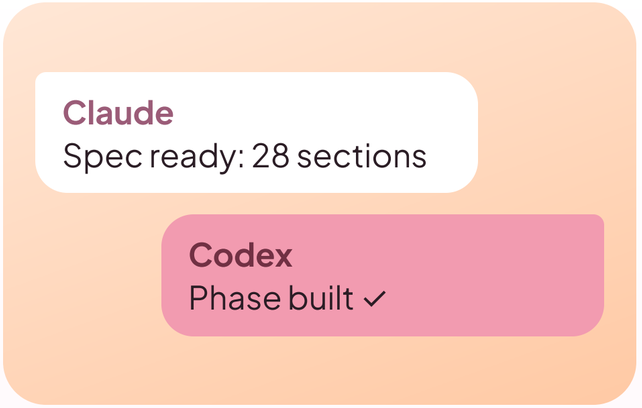

Animations

Motion drives the breathing orb, six feelings and a reduce-motion mode.

Generated audio

Eleven lo-fi calm sessions and a rain loop, all royalty-free and made with code.

AI workflow

Claude wrote the spec and reviewed. Codex built the app from it.

10

REFLECTION · NEW SKILLS AND TOOLS

New skills and tools

01

Writing a spec

A 28-section handoff for an AI builder, plus a log of 24 decisions.

02

Prompting Codex

Sending one phase at a time, then reviewing each screen before moving on.

03

React and Motion

How components, routes and design tokens turn Figma into code.

04

Vercel

Teams, projects, build settings and rewrites for a single-page app.

05

Accessibility

Measuring contrast, 44px tap areas and support for reduced motion.

06

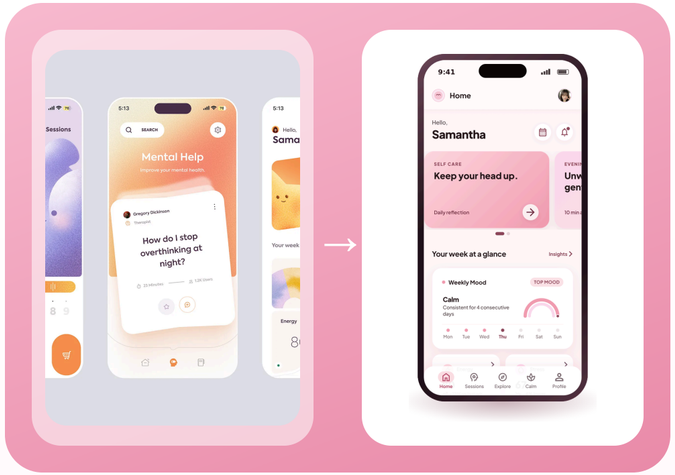

Creative direction

Critiquing my own assets and choosing one direction with clear reasons.

10

REFLECTION · DESIGN AND PLANNING HURDLES

What I had to work through

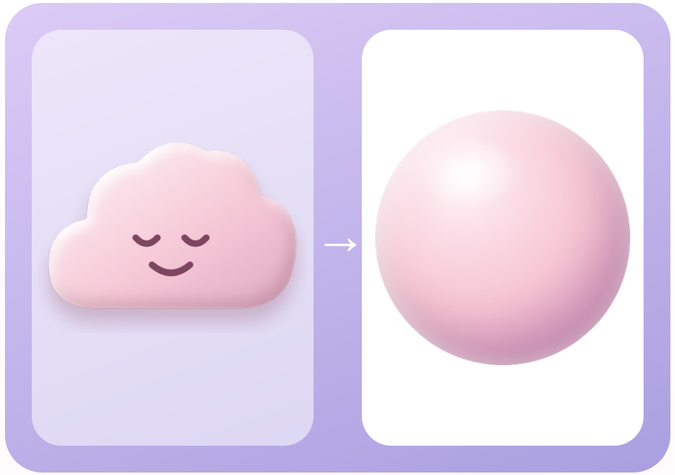

01

Finding the right inspiration

I wanted it to look and work like a period tracker: soft, simple and used every day.

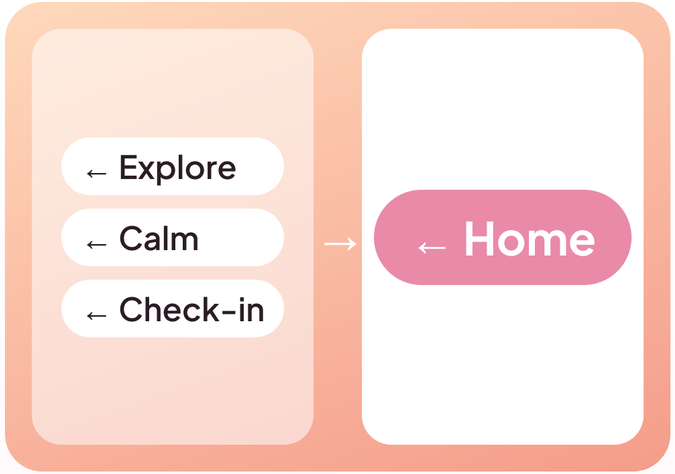

I found a Dribbble concept with that feel and built my blush look from it.

02

Letting go of my mascot

I loved my 3D cloud, but it felt generic. I chose a breathing orb.

03

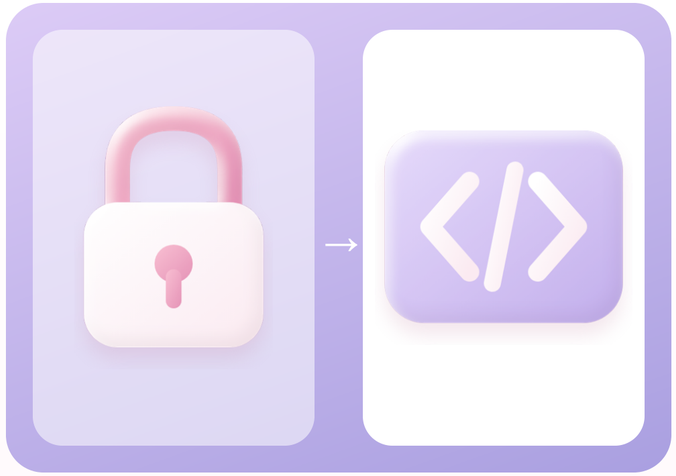

Testing my own app

Back buttons felt random, so I made them all go Home. Only Settings is different: it returns to Profile.

10

REFLECTION · TECHNICAL HURDLES

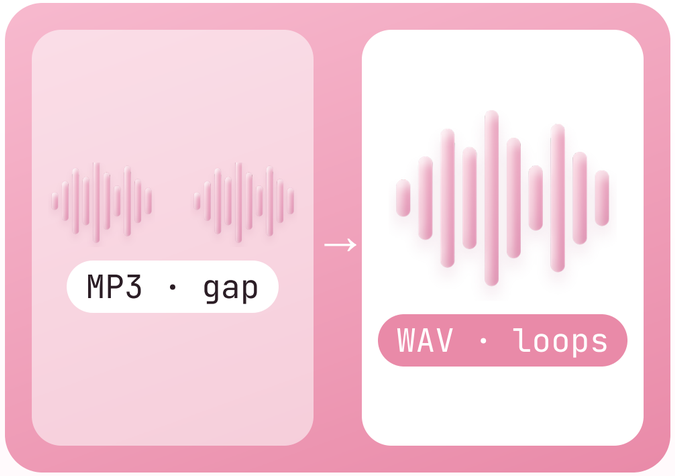

What broke, and the fix

04

Figma assets were blocked

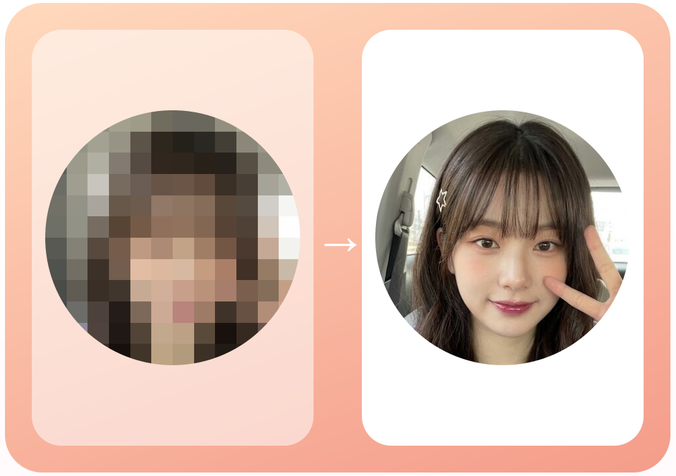

Exported icons as SVG code through Figma’s plugin API.

05

The rain loop had a gap

Switched from MP3 to WAV, which loops without a gap.

06

Profile photos looked pixelated

Replaced them with sharper portraits at four times the size.

10

REFLECTION · FIXES FROM TESTING

What I fixed after testing

07 ✓ Fixed

Gradient seams

One gradient now sits behind the whole app.

08 ✓ Fixed

Stuck Home cards

Drag with a mouse, or tap the dots.

09 ✓ Fixed

Doubled-up buttons

Kept the header arrow and the X. Removed the extras.

10 ✓ Fixed

“View all” did nothing

It now shows all four themes.

11 ✓ Fixed

Square Search outline

A soft ring now follows the pill.

12 ✓ Fixed

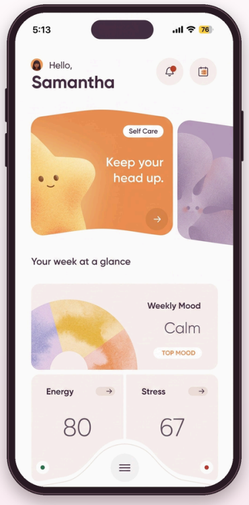

Clipped feelings

All six now sit in a 3 × 2 grid.

10

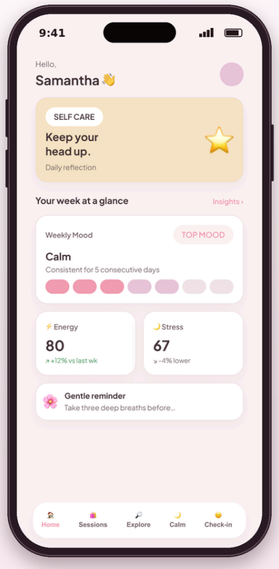

REFLECTION · WHAT CHANGED FROM CONCEPT TO FINAL?

One screen, four versions

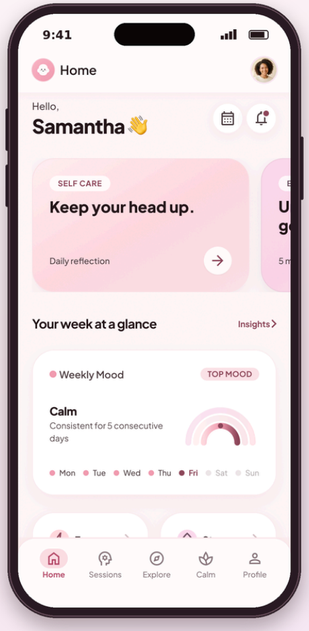

01 · Reference

Orange and lilac clay

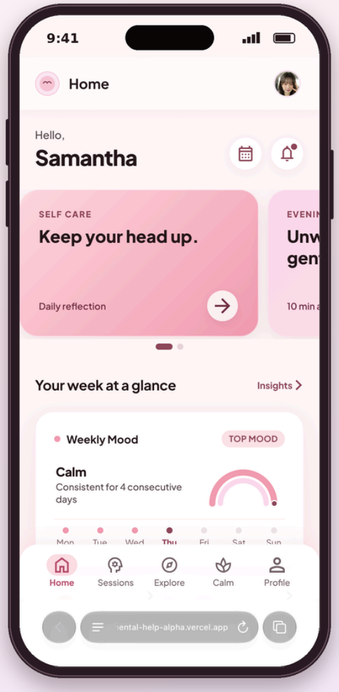

02 · Prototype

Blush with emoji icons

03 · Figma

Hi-fi blush cards

04 · Live app

Orb logo, live data

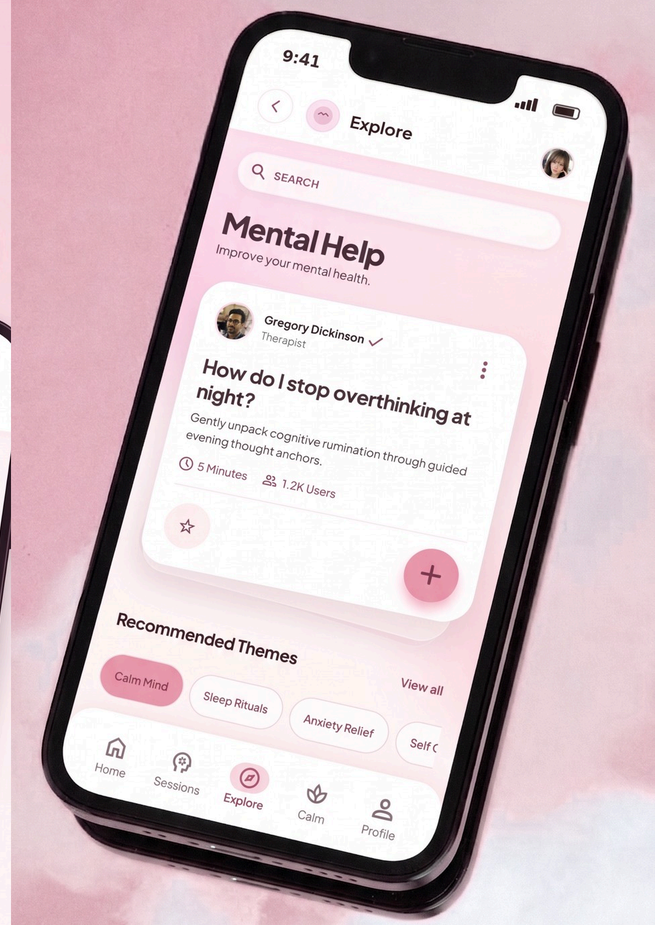

THE FINAL APP

Calm, in your hand

10

REFLECTION · WHAT WOULD I BUILD NEXT?

With more time, I would add...

Insights

Add Insights with mood trends over weeks, building on the new Calendar.

Accounts & Sync

Sign-in with Supabase, so check-ins follow you to any device.

Real Booking

Pick a therapist and a time slot, then pay securely.
